

Lightning Web Sites specialise in affordable web sites for small businesses, communities and clubs.

When looking for a plumber, builder, electrician, garage or school, where is the first place you look? Most people look on the Internet. Are you there?

You may only need one web page to show the world, who you are, what services or items you provide and how they can get in contact with you.

You don't need to be computer literate, we do everything for you.

We design and build your web site, we register and set up your domain name, we supply the hosting and we maintain your web site for you. We supply you with free email addresses for the account and we can redirect any emails to your personal email address so you know when your web site gets mail.

Once your web site is up and running, you pay £60 a year for the domain name and hosting of the web site.

**That's £5 a month for world wide advertising
(24 hours a day, 365 days a year) to billions of people.**

To create, build and set up a single page web site would cost £240 in your first year or £300 for a web site with up to 5 pages.

(12 monthly payments by Direct Debit is available)

Check the Prices tab on our web site for pricing on bigger web sites and features.

You can start off with a single page web site and add more pages over the years when your business increases and finances allow.

Give us a call, consultation is totally free. Let us put your company on the Internet so people can find you, giving you the edge over the competition.
